

## HEAVY DUTY SHOCK ABSORBER FOR THE SATURN FFG

This upgrade will improve one of the major wear items in the counter-stacker-ejector of the Saturn FFG. It eliminates slamming of the finger assembly and reduces machine vibrations. It will also increase the life of all moving counter-ejector components.

Due to the high speed and cyclic action of the finger mechanism, the original shock absorber frequently fails. With this new design, the original shock is replaced with a heavy duty device that is designed to handle all of the impact of the finger assembly-even at maximum speed.

For upgrades to improve production and decrease downtime, always look to Sun Automation Group. Give one of our experts a call at 800-253-7278 to discuss how we can improve your Langston Finishing Machinery.
